

JAPAN PACK 2025 Exhibit and Open House

August 25, 2025

Think Laboratory Co., Ltd. (Headquarters: Kashiwa City, Chiba Prefecture; President: Kaku Shigeta) will be exhibiting at JAPAN PACK 2025 (October 7-10, Booth 7-527), to be held at Tokyo Big Sight this fall. We will be showcasing our flagship FXIJ series water-based inkjet printers for flexible packaging and our NewFX3 automatic laser gravure cylinder production system with an automatic inspection system. We will also be exhibiting various products and demonstrating our inspection system.

In conjunction with this, we will be holding an open house on October 11, focusing on our newly opened Factory No. 6, located within our headquarters factory. Factory No. 6 boasts our largest factory space with a total floor space of over 2,500 m², and is our main factory, also serving as our design and software development office. This event will provide an opportunity to see the latest FXIJ models, as well as the latest models in the NewFX series and peripheral equipment (cylinder inspection machines, Cr paper polishers, and more). Additionally, we plan to introduce our inkjet package manufacturing factory, FXIJ BMF (Business Model Factory), as well as our trivalent chromium technology progress and tour our DLC film deposition factory, and propose cutting-edge facilities and technologies that can be utilized by our customers.
